

## Water rocket launcher build

You need to have some kind of launcher to use water rockets. There is lots of option how to build one. There are also lots of launchers you can buy, that are not so expensive. For example this launcher could be a good one:

<https://www.amazon.com/4M-4605-Water-Rocket-Kit/dp/B005DPWECE>

This website also looks good: <https://www.wikihow.com/Launch-a-Water-Rocket>

One way of building a launcher is described in pictures below:

Parts:

- Cork
- Valve
- Plywood
- Screws
- Metal sheets
- Bicycle pump

Valve is pushed through the cork

Cork is drilled through the plywood.

Picture from below. It is good idea to attach cork with some metal so it can't move.

Picture from the side.

Launcher ready to be used.
