Engage

Carefully analyse the following images.

Image 1

Image 2

**If we divide
waste we all
will win**

1.1- What message is intended to be transmitted by the images?

N.º 1

N.º 2

1.2- What means the message “If we divide waste we all will win”?

1.3- Give examples of materials that are separate in your school.

1.4- “My grandfather has a bunch in the yard with leaves and other stuffs.”

Why do you think John’s grandfather does that?

Investigate

2- In your school leaves, food waste and other materials are separate?

2.1- Are there any composter to do that?

stem4math

Co-funded by the
Erasmus+ Programme
of the European Union

2.2- If not, what can you do to compost wastes in your school?

Investigate sites / books and provide reasons to justify your opinion.

Plan

Composting is very advantageous for the environment and for its health, so that the compost obtained can be used as fertilizer, as it substantially improves the soil structure.

Design of the best composting box sparing costs.

In small groups present the best composting box option.

Research different composting boxes and prices of materials.

Investigate websites, brochures, books ...

Conclude

In your presentation you should answer, among others, the following questions:

- What will be the best solid (cylindrical, prismatic, ...)?
- Which materials will be better (wire, wood, ...)?
- Which are the most economical options?

Create

Now that all the class discussed and reached a conclusion about the best composting box for your school... let's work and improve the environment making your own composting box.

Report

Now let's evaluate all the work done. Report about positive aspects of this project and the less positive and explain your difficulties during all the process.
